

ABSTRACT

A wheel retractable mechanism for roller skate comprised of multiple wheels with each wheel pivoted to a dedicated bracket and then connected to a casing fixed at a sole of the boot by means of the bracket; the bracket being coupled to the casing by means of a slide track; and a retainer being used to secure both of the bracket and casing in their respectively locations; whereby, the bracket being fully pulled out from the casing by releasing the retainer from the bracket for the bracket to face with its base plate or for the wheels to face towards the sole of the boot before pushing the bracket into the casing to be held in position by the retainer so to secure the bracket in the casing to either conceal or expose the wheels depending on the status of use.
